My logo blends HTML brackets with a globe to show how code connects everyone. The arches form a trophy, symbolizing that I'm competitive in my field.

REFLECTION

What was hardest to decide?

The hardest part was digitizing my sketch. I struggled to balance the arches with geometric brackets wich made me switch from hand drawing to vector lines for a cleaner design.This took a lot of time

What did you remove?

I rejected complex 3D effects because they would have been too "busy." By keeping the design simple, it remains functional and easy to redraw by hand.

What does this design say about you?

This design shows that I aim for global connectivity. It reflects my goal to build clean, functional software that helps people around the world connect through good code.
