CMPG214-Distance

My logo blends HTML brackets with a globe to show how code connects everyone. The arches form a trophy, symbolizing that I'm competitive in my field.

github.com/jcbadenhorst20-hub/nwu-identity-project

## What was hardest to decide?

The hardest part was digitizing my sketch. I struggled to balance the arches with geometric brackets wich made me switch from hand drawing to vector lines for a cleaner design.This took a lot of time

## What did you remove?

I rejected complex 3D effects because they would have been too "busy." By keeping the design simple, it remains functional and easy to redraw by hand.

## What does this design say about you?

This design shows that I aim for global connectivity. It reflects my goal to build clean, functional software that helps people around the world connect through good code.
